ABSTRACT

The rapid expansion of organized retail in India has placed increasing pressure on regional Fast-Moving Consumer Goods (FMCG) distributors to operate with greater efficiency, accuracy, and data-driven intelligence. Yet the majority of small and

CHAPTER 4: DATA ANALYSIS, RESULTS AND INTERPRETATION

4.1 Overview of Dataset

This chapter presents the findings of the exploratory data analysis and demand forecasting model developed as part of this project. The analysis draws on six datasets covering the period from June 2023 to March 2026: sales billing data, purchase data, app-recorded order data, daily stock snapshots, a SKU master catalogue, and an outlet master database. All datasets were subjected to a systematic cleaning and anonymization protocol prior to analysis, as described in Chapter 3. The analysis is organized into five sections: overall sales performance, product-level analysis, retailer analysis, demand pattern analysis, and the demand forecasting model evaluation.

The key summary statistics across all datasets are presented in Table 4.1 below.
